Introducing the Key Concepts

Social Capital: Bonding and Bridging

**Bonding Social Capital**
- Exists when trust and norms of reciprocity are evident within relational networks where participants share a common social identity.

**Bridging Social Capital**
- Exists when trust and norms of reciprocity are evident within relational networks beyond the confines of intimate and familial social networks.

Bridging Social Capital
Barry McGaw

“Given the growth of the non-government sector, we need specifically to consider whether that development, in the name of choice and, with government funding, in the name of fiscal fairness, has positive or negative effects on educational outcomes and on bridging social capital and, ultimately, social cohesion”

Cited from *The Stupid Country* – Bonnor and Caro (2007, p. 107)
Dr Ken Boston

Bridging refers to relations among people who initially may be strangers to each other; perhaps divided by culture, religion and most potently by the social and economic means at their disposal...Bridging is accomplished when children and young people learn that common principles, values, norms of justice and reasonable behaviour are the means for understanding different points of view and getting on well with each other. **Learnt in public schools, these are the building blocks of trust so essential to a liberal society and economy.**

Public schools are the only universally accessible institutions available to accomplish and enhance such bridging as well as bonding, and to lay down the foundation for future reserves of trust, across classes, religions, suburbs and cultures (p. 26).

Wilson, L (2003)

*Religious schools and Australian Democracy.*

Introducing the Key Concepts

Religious Homogeneity - Evangelical Christian Schools

**Evangelical Christian Schools**

**Characteristics:**
- Commitment to alignment between curriculum and a Christian world-view.
- Employment restricted to those who have a personal Christian faith.
- Support of school’s ethos and curriculum an enrolment requirement.
The Aim
To investigate the influence that religious homogeneity, within the context of evangelical Christian schools in Perth Western Australia, has on the development of social and civic attributes and the capacity of students to form bridging social capital when they enter and engage in a pluralistic workplace.

The Overarching Question
How does the nature of religious homogeneity within an evangelical Christian school’s context, influence the preparation of students to successfully form bridging social capital when they enter and engage in a pluralistic workplace?
