SEVEN CONTEMPORARY IDEOLOGICAL PERSPECTIVES ON TEACHER EDUCATION IN BRITAIN TODAY

Dave Hill
West Sussex Institute of Higher Education

ABSTRACT

This paper examines and critiques seven contemporary ideological perspectives on teacher education in Britain; it examines the Radical Right, the 'Soft Centre', the 'Hard Centre', and the 'Left in the Centre'.

In doing so it refers to three interrelated levels of discourse: the popular Press, the academic Press and the work of ideologues, and the Party Political.

The paper critiques not only the Radical Right but also Centralist positions such as the erstwhile Left, the 'Left in the Centre', criticising their virtual evacuation of the cultural and ideological field of teacher education.

Three types of Radical Left discourse, all of which express strong commitment to social justice and to teacher education and schooling developing a moral-ethical level of reflection, are then isolated:

1. the utopian transformative intellectual possibility project of Henry Giroux and associates such as Peter McLaren and Stanley Aronowitz;
2. the pluralistic autonomous critical project of the 'Madison School' such as Kenneth Zeichner and Tom Popkewitz;
3. the deterministic reproductionist model represented, in some respects, by John Smyth.

The Giroux model calls for political action within as well as outside the classroom, the Zeichner model eschews political action within the classroom but calls for it outside, the reproductionist model is deterministically pessimistic about the possibility of school based or intellectual based political change.

The paper ends by arguing for an assertion and reassertion of a distinctively Radical Left discourse and programme, and action on teacher education in Britain and calls for the development of teachers as 'transformative intellectuals'.

INTRODUCTION

Teacher education in England and Wales is in the spotlight. It is under ferocious, sustained and nakedly ideological assault at three inter-related levels of discourse - the radical right middlebrow and quality media (in particular the Daily Mail and Mail on Sunday); radical right ideologists, think-tanks and academics; and the current (1991/92) Conservative education Ministerial team.

Throughout this paper, references are made to, and quotes taken from the above three types of source each of which features in a discourse of derision (Maguire, 1991).

These levels of discourse, aimed at different audiences, might be expected to use very different vocabularies, sentence structures and sentence lengths. While there are differences, in general they don't. All these three levels punch home and deride 'trendies' in education. All use populist, punchy, and social panic terminology metaphors and 'enemy within', 'scapegoatism' typical of the Reagan-Bush and Thatcher-Major project for reconstituting schooling, higher education, teacher education, adult and further education - the ideological states apparatus of the education system - into the service of late capitalist economy. The misinformation systems of the Conservative government, illuminated in such varied sources as 'Spycatcher', the Ken Loach film 'Secret Agenda' and the 1991 Alan Bleasdale television series 'GBH', show, through fact and through fiction, the servant role of the right-wing press and the interactive relationship between that press and the Conservative leadership, over, for example teacher education as a whole, or to take one cause celebre of 1991, the events surrounding Culloden Primary School.

The 1991 attacks on Culloden Primary School, at first hailed widely after its BBC TV series as a model of non-sloppy progressive, child-centred, anti-racist, anti-sexist education (even welcomed initially by the right-wing Daily Telegraph and The Times), have been like an ideological blitzkrieg.
A shake-up of teacher training is needed. Current teacher training colleges and their methods must be much more than that. Of the teacher training colleges and their methods - the 'look and say' method, the 'phonics method' - a condemnation extended to the institutions of teacher education propagating such approaches.

The reading methods controversy is part of the current attack on teacher education, with Tim Eggar, one of the Junior Ministers for Education baldly announcing "That in future most teachers would be trained in schools instead of teacher training schemes" (Massey, 1991c) and with a Daily Mail full page article announcing that our education system is in turmoil. Nouere is that more apparent than in the teacher training colleges - a shake-up of teacher training is now certainly at the top of the Government's manifesto pledges for the next election.

Education Secretary Kenneth Clarke, who has condemned child-centred learning as 'silly', has not been idle.

After the 'Sharon Shril' affair in which Cambridge classicist Amnis Garfield was denied a teacher training place at Nene College, Northamptonshire, yet was offered an internship when she posed as a fictitious Afro-Caribbean feminist, he sacked some of the 'trendies' from the quango which validates teacher-training courses.

Further, he has ordered two inquires: the first into the quality of courses approved, and the second into the way in which teachers are trained to teach reading. It is an open secret that he is outraged by some of the courses which have been approved.

Ministers are itching to break the monopoly - and power - of the teacher training colleges and will use the next election to do it. The main weapon favoured by them will be 'on the job' training.

Like their National Curriculum for schools, current radical right proposals for dethroning teacher training institutions for replacing it by training in school apprenticeships or by putting it altogether, are a gigantic ideological experiment, playing with children's schooling and futures.

Supposedly in the name of 'standards' this is, in reality, in the cause of 'conforming the future', of establishing ideological supremacy, of attempting to assert their ideological hegemony through the ideological state apparatuses.

It is not my purpose here to give a description and critique of the two new school-based routes into teaching (the Licensed Teacher and the Articles Teacher) schemes nor of current (mid-1992) proposals to change college based B. Ed and PGCE courses into primarily school based courses. For this critique see Hill (1988, 1990, 1991a, 1992a) and Bock (1991). In May 1991 there were 498 Licensed Teachers employed in 43 local education authorities, 290 of them were graduates.

There are currently a number of national and localised formative evaluation schemes. However, some problems with school basing, or, most teacher education are as follows: (i) over-loading of schools; (ii) the cost of Articled Teacher bursaries and of one to one ratio between mentors and articles teachers and licensed teachers; (iii) the rapidly apparent desire among articled teachers for less time in school and more sustained training in school; and (iv) concern about the context specificity of most school-based schemes. A number of recent evaluations have borne out these criticisms (see Barrett et al. 1992; DENI (1991); NFER (1991); DES (1991a); Hill (1992a and 1992b).

From sections of the Left, inherent problems are apparent - problems of dethroning, de-legitimating, de-intellectualising, de-reflecting and de-skilling. On the Right, however Ministers and some of the Press, such as the Daily Mail have apparently already pre-judged in favour of such schemes. Proposals to base teacher education courses in school are not new. As long ago as 1990 were met with such right-wing media headlines as 'Training shake-up to beat college trends' (Daily Mail, 4 Jan). 'Is this the Right way to teach the teacher? Clarke's aims for return to traditional methods as standards plummet' (Sunday Express, 29 Dec) and 'Do we really need these colleges?' (Sunday Express, 5 Jan). Long-term radical right ideologues nished to welcome such moves, for example Shelia Lalor with her Times article 'Touch of class for teachers. Plans to train teachers on the job should be welcomed'.

My particular perspectives from a Radical Left position and from research replacing the negative by the positive in school apprenticeships or by putting it altogether, are a gigantic ideological experiment, playing with children's schooling and futures.
Articled Teacher Scheme. The Articled Teacher Scheme attracted about 403 students in 1990-91 and the Licensed Teacher Scheme 439, a quarter of them, non-graduates (Barrett, E. et al., 1992). So, in 1990-91 around 96% of teacher education was carried out in college-based courses, and around 4% in school-based schemes.

LICENSED TEACHING AND ARTICLED TEACHING

College-based teacher education is avoided in the Licensed Teacher Scheme whereby untrained over 24 year olds are enabled to teach in state schools without having previously undergone any teacher education whatever. The only formal qualifications are the age qualification, a grade C or above GCSE in Maths and English, and completion of the equivalent of two years full-time post - A level higher education. A degree is not necessary.

Indeed it is possible that someone who failed at the end of 2 years of a 4 year B.Ed degree could become a Licensed Teacher on acceptance by a school, not going by (and/or in) (practice) by a Local Education Authority.

Licensees are appointed to a school staff, they are not, unlike Articled Teachers, supernumerary, they have their own classes. At the moment a number are already teaching, as untrained teachers, for example of foreign languages (in what, until the Licensed Teacher Scheme was, in intention, an all-graduate profession).

It is worth noting the genealogy of the Licensed Teacher Scheme, being based (in the same way that the new City Technology Colleges are - loosely based on Magnet Schools) on an American model. It is worth noting the genealogy of the Licensed Teacher Scheme, being based (in the same way that the new City Technology Colleges are - loosely based on Magnet Schools) on an American model.

In 1990-91 around 96% of teacher education was completed by school-based schemes, the American school curriculum is far more 'teacher-proof' that the British, United States teachers delivering courses which are far more off the shelf', far more pre-designed and predetermined (Hill, D., 1990).

The second way in which college-based teacher education in Britain can be substantially avoided is the substantial immersion two years training on the job. Teachers in 1991 receive 5,500 pounds for the first year and 6,500 pounds for the second year (more in London). The two-year Articled Teacher scheme for graduates aged 25 and over, is basically an apprenticeship scheme. It was subsequently upgraded in nomenclature as the 'Articled Teacher Scheme'. This scheme in 1990-91 involves 16 pilot schemes with around 50 Articled Teachers in each.

Of the four routes into teaching, the B.Ed, the PGCE, the Articled Teacher Scheme and the Licensed Teacher Scheme, the first three lead to recognised academic awards and are subject to the requirements of CATE (the Committee for the Accreditation of Teacher Education), the Government appointed supervisory body for teacher education, but the last employs an entirely different approach to the award to Qualified Teacher Status (QTS). Unlike the Articled Teacher Scheme, which is based upon a notion of partnership between LEAs and higher education, the Licensed Teacher Scheme does not require (though it does permit and even encourages) the involvement of conventional teacher training institutions in the LEAs training programme (Whitty, G., 1991a).

It should be noted that in private schools, at present attended by around 7% of children in England and Wales, a teaching qualification is not legally required. Hence many private school teachers are untrained.

Finally, it is possible that within two or three years college based teacher education will have been replaced, very substantially, by school based initial teacher education.

THREE MODELS OF INITIAL TEACHER EDUCATION (ITE)

Two current models of initial teacher education are commonly presented as alternatives to each other:

1. the classroom competency/skills model;
2. the reflective practitioner model.

But these are not the only models. There is a third, a 'radical left', model of the teacher which is a distinctive variant of the reflective practitioner model - distinctive in its pedagogy and in its Initial Teacher Education curriculum content and in its intention. This model, promulgated here is:

3. the critical reflective 'transformative' practitioner model.

This model is particularly associated with the work of Henry Giroux such as, for example, Giroux and McLaren (1989); Aronowitz and Giroux (1986). See also Hill, D. (1989, 1999, 1991a).

Time and moral terms and pessimistic; the cultural political ethical Radicals there are three identifiable categories: the social reproduction critical model, which is essentially deterministic in Marxist terms and pessimistic; the cultural political ethical and moral model, for example of Zeichner, Liston, and Popkewitz, and the ethical and moral 'transformative intellectual' model of Giroux, McLaren and Aronowitz. The ideological debate and culture war is discussed in Hill (1989, 1999) drawing on Giroux, McLaren, Apple, Liston, Zeichner and Portuguese studies by Stor (1986) and Fernandes (1990). In the USA it has been critically in Apple (1989a, 1989b) and Giroux.

1. THE RADICAL RIGHT

The current culture clash is between what might still be called, despite Mrs Thatcher's resignation as British Prime Minister, the Thatcherite culture of privatised service and private interest culture on the one hand, against a socialist culture of public service and public interest.

In the first year since her demise, there has been no apparent let-up by the Conservative Government in the emphasis on competitive, individualistic, privatising, hierarchicalising, elitist, differentiating, Hayekian policies regarding schools or teacher education.

'Radical Right' writers on education and on teacher education in Britain include the Hillgate Group. (Roger Scruton and Caroline Cox among others), Stuart Sexton, Anthony O'Hear, Dennis O'Hear, Yuval Harari; the cultural political ethical and moral model, for example of Zeichner, Liston, and Popkewitz, and the ethical and moral 'transformative intellectual' model of Giroux, McLaren and Aronowitz. The ideological debate and culture war is discussed in Hill (1989, 1999) drawing on Giroux, McLaren, Apple, Liston, Zeichner and Portuguese studies by Stor (1986) and Fernandes (1990). In the USA it has been critically in Apple (1989a, 1989b) and Giroux.
comment in a number of right-wing daily newspapers and weeklies such as the Times Educational Supplement, some controlled by Rupert Murdoch. Initial training is the first stage in a process of continuing professional development through induction and subsequent INSET. No initial training programme can equip new teachers with all the knowledge, understanding and skills which they will need in their career.

1.3 During their initial training, student, articled and licensed teachers should, as an essential part of their wider professional training, develop the following knowledge, understanding and skills:

- awareness of the statutory framework in which the National Curriculum functions;
- knowledge of subject content and teaching methods;
- skills in assessment, recording and reporting achievement;
- a view of the whole curriculum; understanding of curriculum continuity;
- IT capability;
- skills in curriculum planning and review.

The former consensual liberal democratic culture of the 60s and 70s is left looking bewildered, seeking to de-ideologise education, to retreat from the cultural wars and to camp out on the lawlands of pragmatism and competency training. It has retreated from egalitarianism on grounds of expediency and/or faint-heartedness.

attack anti-sexism as overtly or as strongly as their visceral attacks on Marxist egalitarianism, anti-racism, or anti-heterosexism.

One chapter in O’Keefe’s earlier book (1986), does so. The contrast with radical right winged newspapers such as the Sun, the Daily Mail, the Mail on Sunday is very strong. In those, explicit anti-sexism is prominent:

- college-based teacher education concentrates too little on classroom discipline skills (Shaw (1987); Sexton (1987); O’Hee (1988));
- college-based teacher education is too progressive and child-centred (The Hillgate Group (1986, 1987); O’Keefe (1990a));
- other than practical skills, teachers also need “knowledge and love of the subject to be taught” (O’Hee (1988); Trend (1988));
- there is no little need for educational theory (Sexton (1987); Lawlor (1990a, 1990b); O’Hee (1991)).

THREE CENTRE PERSPECTIVES

A view has emerged which could be described as the social democratic/liberal democratic/soft/wet/Conservative consensus. This has been broadly in tune with professional teacher union and ‘official’ body opinion. This (in my view) is the perspective of the ‘current educational establishment’, with a broad set of views defending much of the educational philosophy of the 1960s and 1970s. It is moderate, progressive, child-centred and generally supports college-based teacher education developments, as updated by the 1984 and 1989 requirements of the Committee for the Accreditation of Teacher Education (CATE), and by the 1991 National Curriculum Council (NCC) document ‘The National Curriculum and the Initial Training of Student, Articled, and Licensed Teachers’. (The DES consultation document was substantially unlike Circular 24/29 (DES, 1986b)).

Two major aspects of CATE of 1984 are the requirements that teacher education lecturers should have a relevant, relevant and substantial teaching experience in schools; and secondly, that the ‘Main Subject Study’ in the B.Ed degree be upgraded to 50% of time on the B.Ed. The major current 1989 requirement of CATE is that teacher trainers should undertake school teaching experience equivalent to one term in every five years. The 1989 document requires that institutions reach this standard by the academic year 1992-93.

The NCC document, together with the CATE criteria are, in effect, a new National Curriculum for Initial Teacher Education, relating and subordinating ITE to the National Curriculum for Schools.

The first three paragraphs of the NCC (1991, p. 3) document are:

1.1 The National Curriculum is now an important element in all initial teaching training (ITT) and most in-service education and training (INSET). Its introduction has provided a framework within which students, teachers, Higher education (HE) tutors and Local Education Authority (LEA) staff can work together and has helped to promote a common language form professional discussion about teaching and learning.

1.2 The need to prepare new teachers for the National Curriculum has also helped to clarify thinking about what is reasonable to expect of an ITT course. Initial training is the first stage in a process of continuing professional development through induction and subsequent INSET. No initial training programme can equip new teachers with all the knowledge, understanding and skills which they will need in their career.

1.3 During their initial training, student, articled and licensed teachers should, as an essential part of their wider professional training, develop the following knowledge, understanding and skills:

- awareness of the statutory framework in which the National Curriculum functions;
- knowledge of subject content and teaching methods;
- skills in assessment, recording and reporting achievement;
- a view of the whole curriculum; understanding of curriculum continuity;
- IT capability;
- skills in curriculum planning and review.

The former consensual liberal democratic culture of the 60s and 70s is left looking bewildered, seeking to de-ideologise education, to retreat from the cultural wars and to camp out on the lawlands of pragmatism and competency training. It has retreated from egalitarianism on grounds of expediency and/or faint-heartedness.
However, a number of teacher educators have put their heads above the parapet in publications or counterblast was the round robin letter signed by Chair of CATE. In Craft’s words also Baker, were fully integrated. At the technicians is a very worthwhile activity, but appropriate way of categorising the content of O’Keefe, 1991 ITT courses today as the theory and the practice said. 1990 UCET “The training by those recruited. Yet another false assumption that ‘education’ is abstruse theory. Education is intelligent action informed by analysis and reflection. Nobel prizewinners therefore, ought to be well informed and thoughtful practitioners still experimenting and well able to teach a variety of classes. Within this broadly Centrist group the three distinguishable sub-groups are the ‘Soft Centre’, the ‘Hard Centre’ and the ‘Left in the Centre’.

2. THE ‘SOFT CENTRE’

This group argues that ‘everything in the garden is rosy’, Nirvana would exist if there were resourcing and people would ‘let us get on with that’. A number of chapters in Booth, Furlong, and Wilkin (1990) critique current developments in teacher education ideologically, for example chapters by Margaret Wilkin, by Crozier, Mentor and Pollard, and by Wragg. So too does Robert Cowens’ chapter in Norman Graves (1990).

Ted Wragg often writes hilariously, for example see his ‘Join the Right and ring the changes’ in the UCET Press Conference and Release further attacked misrepresentation of initial teacher education work and suggested that the theory/practice polarisation was not an appropriate way of categorising the content of ITT courses today as the theory and the practice were fully integrated. At the Press Conference Tony Becher (UCET, 1991) of Sussex University said: “We are facing a complete disaster which would make the poll tax look like a fairy tale. If schools are to have any future there must be a complete responsibility for training of teachers without adequate resources or the desire to train them, the cumulative effect would be on the scale”. A number of chapters in Booth, Furlong, and Wilkin (1990) critique current developments in teacher education ideologically, for example chapters by Margaret Wilkin, by Crozier, Mentor and Pollard, and by Wragg. So too does Robert Cowens’ chapter in Norman Graves (1990).

He attacks ill-informed and vitriolic attack on teacher training by the right-wing critique of education who show the greatest reluctance to go and look at the actual schools they criticise so readily. One fantasy put out is that the need for training actually prevents good people from being recruited. Yet when maths and science graduates were allowed straight into schools without training in the 1970s and 1980s more than 2,000 a year, many with higher degrees and good first degrees chose to take a PGCE course and only a hundred or so entered untrained.

Another is that training does nothing for people; that little knowledge is needed to teach in a primary school and that graduates with a decry knowledge of their subject can simply go into a classroom and start teaching. I have never been able to understand this contempt for training. I always fancy putting some hapless Nobel prizewinner in with 4D on a Friday afternoon to test this ‘you only need to know your subject’ view. Some right wingers seek to counter by arguing that a Nobel prizewinner in education would not be able to cope with 4D either. This is based on another false assumption that ‘education’ is abstruse theory. Education is intelligent action informed by analysis and reflection. Nobel prizewinners therefore, ought to be well informed and thoughtful practitioners still experimenting and well able to teach a variety of classes.

3. THE ‘HARD CENTRE’

Another collection of individuals seek to accept some of the critique of the Radical Right. Such ‘Hard Centre’ teacher educators, for example David Hargreaves and Mary Warnock do not appear to be organised into formal groupings. David Hargreaves’ views have been set out in a series of articles in the Times Educational Supplement. See Hargreaves (1989a, 1989b, 1989c, 1989d, 1990a, 1990b, 1991, 1992). See also Beardon, T., Booth, M., Hargreaves, D. and Reiss, M. (1992). Mary Warnock’s views are set out in Warnock (1985, 1988). Among them there seems to be a consensus emerging about some of the below points. They see something wrong with the state of teacher education, and welcoming the gowing aw of the cobwebs, the opening up of these debates. They accept a combination of:

1. easier academic entry qualifications onto Initial Training (I.T.) courses if it is tied to maturity and previous experience;
2. shorted course on the lines of the shortage subject shorted B.Ed 2-year courses;
3. other models of shortage courses (of which there are few examples in England);
4. a reduction in (effectively an attack on) reflective theory on macro-issues, radical theory and practice relating to critical theory and egalitarianism, together with an increase in time on classroom competencies and skills;
5. virtual totally school-based siting of Initial Teacher Education (I.T.E) (as in the Licensed Teacher Scheme);
6. substantially school-based siting of I.T.E. (as in the Articled Teacher Scheme). This last view is particularly associated with David Hargreaves in a series of attacks on the B.Ed degree in The Times Educational Supplement;
7. school-based siting (of the ‘substantial’ rather than ‘total’ model) either in specially selected teaching schools, (which might include City Technology Colleges), or involving a much wider use of schools, even rotating the experience to involve most or all schools. They have recently been joined in one respect by Michael Bassey (1991) arguing for the abandonment of the B.Ed and its replacement by a two year PGCE. His argument is that the four year B.Ed is ‘too complicated’ and ‘too demanding on staff, and students cannot achieve high standards in professional practice’. Yet he assumes that the two years professional development in terms of two year (post-graduate) professional training will do the job better than that (two years equivalent) of the B.Ed degree devoted to professional training. In comparing his preferred model of 3 years plus 2 years PGCE to the 4 year B.Ed he ignores the recruitment attractant of the B.Ed both for 18 year olds and for mature students - no small consideration in an era of teacher shortage. However to compare like with like in terms of higher and professional education would be most useful. For example by comparing his 3+2 year option with a 4 year B.Ed plus an induction year based on the best (ILEA?) models of release, discussion, and reflection time for inducting/probationer teachers. In other writings Bassey is highly critical of conservative changes in teacher education.

The ‘Hard Centre’ may well be supported not just be atavistic Radical Righters but also by some levels of college managements flexing their newly strengthened autonomous managerial muscles, delighting in shaking up existing practice and staffs.

This should not be underestimated, the dramatically increased levels of pay and power awarded (and self-awarded) within a deliberately designed ideology of professionalisation. Polytechnic and College Managements in 1991 has had noticeably negative effects on the collegiality and proto-democracy of many institutions. Managers now more overtly manage, the managed are now more overtly managed. Managerial muscle flexing is now more legitimised - by law - and rather less located within liberal democratic/social democratic cultures of staff-student and management staff relationships.

In the new increasingly competitive bidding process for student numbers in the Polytechnics and Colleges sector since 1985, (prior to which the bidding process was more discrete and control over ITE and other courses more permissive) various college managements and other college teacher educators appear to act from expediency. They either act habitually, bending to every authoritative wind that blows, or selectively, partly on the grounds of avoiding retribution, cuts in funding or cuts in student numbers.

This ‘Hard Centre’ sub-group of the Centre is not, as far as I am aware, an identifiable organised
grouping nor do they all accept all seven of the proposals. In any case some of these proposals are alternatives to each other. But they seem to accept, emphasise or demand: more school-based, more skills/competency training, less critical theory and egalitarianism, shorter courses, and easier access into teacher education and teaching.

4. THE 'LEFT IN THE CENTRE'

This group comprises individuals and networks whose ideological orientations are left of centre, sometimes a little, sometimes a lot.

Groups and initiatives have been set up by BERA (the British Education Research Association), UCET (the Universities Council for the Education of Teachers), by 'The Future of Teacher Training' (sic) Writing Group, co-ordinated by Jean Rudduck and David Bridges, and by the 'Imaginative Projects: Arguments for a New Teacher Education' group whose publication of that name was published in January 1991.

The British Educational Research Association (BERA) research group on teacher education includes Jack Whitehead, David Hustler, John Elliot, Jean Rudduck, and Dave Hill. The UCET group (Universities Council for the Education of Teachers) embraces a wide number of University teacher educators. The 'Future of Teacher Training Group' is open to teacher educators across the binary (University/Polytechnic and College) divide, and the 'Imaginative Projects Group' publication is just published (Hextall et al. 1991). As well the writers Ian Hextall, Martin Lawn, Ian Menter, Susan Sidgwick and Steven Walker, this involved initially though not finally, Colin Lacey, Dave Hill and Geoff Whitty. Organised resistance to current attacks on theory based and on college-based education has become evident since 1990. See for example UCET (1990) press release on teacher education. The Minister of Education's speech on teacher education (Clarke, K. 1992b and DES 1992a), and Consultation Paper proposing basing 80% of the one year postgraduate PGCE course in school (DES 1992b) drew a spate of critical responses. See, for example Adams, A. (1992), Elliott, J. (1992), Hodgkinson, K. (1992), UCET (1992), PGCE (1992), Menter, J. (1992) and Gilroy, D. (1992). Both Menter and Gilroy are particularly hard-hitting.

As organisations BERA and UCET do not have a specific political orientation, and are more heterogeneous than the other two specific issue groups mentioned here. In general, however, the teacher education papers at the 1989 and 1990 BERA Conferences were highly critical of Radical Right developments in ITE, and very supportive of the reflective practitioner model. The 1990 UCET press statement is similarly caustic about (two of) the Radical Right attacks on 'teacher training'.

The apparent intentions and the group writings of these various groups, however Left their personal politics might be, differ little from those of the 'Soft Centre'. In some cases this derives from the politics of the lowest common denominator in opposing Radical Right attacks on teacher education. In other cases it may derive from other aspects of 'reformism' - such as moderating views in the hope of gathering wider support, wider alliances.

While such initiatives are welcome for those reasons implicit in political 'reformism' or 'revisionism', they do fail to go much beyond a defence of and rationale for the status quo - they neglect overt and explicit issues of social justice and equality as do some recent internal Labour Party discussion documents in 1991 and the December 1991 Labour Party policy document on teacher education and training, whatever their other merits. While individually and collectively many adherents and activists in such networks are highly committed to such issues informing initial teacher education, such concerns are not made explicit, in their group activities or if they are, instead of being neon-lit, they are, in places illuminated by a flickering candle.

As organisations BERA and UCET do not have a specific political orientation, and are more heterogeneous than the other two specific issue groups mentioned here. In general, however, the teacher education papers at the 1989 and 1990 BERA Conferences were highly critical of Radical Right developments in ITE, and very supportive of the reflective practitioner model. The 1990 UCET press statement is similarly caustic about (two of) the Radical Right attacks on 'teacher training'.

That principle is that they see education as a process of empowering people with the understanding and competences which increases effective participation in our society, and enables people to define and realise their identity, think critically about the world, and to change it (Hextall, I. et al. 1991, p. 23) a wholly admirable and concisely presented principle.

While this may well have been a principle informing the writers' individual practice and perspectives it is difficult to see how it has informed their collective booklet in any explicit way. That is to say, this highly important principle, one of active, critical, reflective agency (though not necessarily one stemming from an emancipatory egalitarian metanarrative), is actually undeveloped, left without salience or profile in their booklet.

While the booklet has considerable value, it could have been written by the Soft Centre.

It is too early to pass similar comments about 'The Future of Teacher Training Writing Group' convened by Jean Rudduck and David Bridges.

The highly commendable aims of that group are as follows:

1. To define/advance a view of: teachers as intelligent, thinking practitioners; teaching as a form of practice which has constantly to be informed by sensitivity, intelligence and reflectiveness in practice.

2. To defend/advance the distinctive contribution which institutions of higher education have to make to the development of practice thus conceived (at the same time as valuing the distinctive contribution that in school practitioners can make to that training in partnership with higher education).

3. To challenge and correct some of the mythology about current teacher training propagated by the 'raving right';

- that current training is entirely disassociated from practical experience in schools (they seem to have no idea of the amount of time that students spend in school-based work with or without tutors);
- that practising teachers play no significant part in the selection, training or assessment of student teachers (they of course play a very active part in most institutions);
- that the curriculum of teacher training is largely determined by the ideological whims of teacher educators (they don't seem to have heard of CATE or of the Secretary of State's requirements).

4. To disentangle some of the muddle about the relationship (or otherwise) between:

i. the character and quality of initial training;
ii. the recruitment and retention of teachers;
iii. the mismatch between initial training qualifications and the posts held by large numbers of teachers;
iv. to work in effective partnership with practising teachers.

A number of the ten Polytechnic and University signatories to that manifesto can be regarded as Left of Centre in varying degrees.

However, like the Hextall/Lawn 'Imaginative Projects' group, their collaborative intentions are actually minimalistic. No doubt their intention is to maximise the breadth and depth of their embrace and impact - honourable intentions - but they are not, as a group, overtly about the development of critical reflective let alone 'transformative' intellectuality. Their aims are ultimately defensive and initially defensive. They are reactive, unlike the 'Imaginative Projects' booklet which has a proactive element. In making this criticism I am well aware that many of those involved, such as, to take one example, Donald McIntyre (1990b) have written forcefully about the need for student teachers to develop a critical understanding of the curriculum and pedagogy of their subjects' and an appreciation of the potentialities and the
problems of achieving social justice in their own teaching. Many members of both the Rudduck/Bridges the Future of Teacher Training Writing Group and the Lawn/Flexell 'Imaginative Projects' such as Jean Rudduck and Ian Menter have substantial publications and pedigrees in critiquing the Radical Right on education and teacher education. See for example Rudduck (1989, 1990) and Menter (1988) and Crozier, Menter and Pollard (1990).

I am also aware that the group/network has hardly yet begun to function. But, as it stands, its five intentions, while laudable, are not Radical and are not identifiably Left. The only difference between this particular 'Left in the Centre' agenda and that of the 'Socialist' centre, is in its political history and individual politics of much of 'The Future of Teacher Training Writing Group'.

The final example I wish to give here, of a 'Left in the Centre' (British) programme for teacher education in the Labour Party document of December 1991, 'Investing in Quality: Labour's plans to reform teacher education and training'.

The documents eight years away from current (mid 1992) Conservative proposals do de-colonise, de-critique, teacher education by placing it primarily in schools. The Labour Party plans support the role of theory, the role of colleges in ITE, and make a commitment to equal opportunities as part of a national core curriculum for teacher education. However welcome the plans are in contrast to Conservative plans, they are not identifiably Radical or Critical or Transformative.

THREE TYPES OF RADICAL LEFT DISCOURSE ON TEACHER EDUCATION: INTRODUCTION

There are three distinctive variants of Radical Left/Socialist/Communist/neo-Marxist discourse on teacher education in late capitalist societies such as Britain. It has to be said that, other than the Hillcole Group's espousal of teachers and teacher educators as 'transformative intellectuals' the following are analytical categories rather than organised groupings. These three categories are:

1. Social reconstructivist/deterministic teachers who see little space for contesting the dead hand of capitalism (in some respects, John Smyth).

2. transformative teachers outside the classroom committed to the autonomy of intellectuals and of students within a pluralistic discourse within the classroom committed to the autonomy of intellectuals and of students within a pluralistic discourse within the classroom (e.g. Zeichner, and associates);

3. transformative intellectuals or public intellectuals whose belief in social justice and egalitarianism informs teaching within as well as outside the classroom (e.g. Giroux and associates such as Arowowitz, McLaren).

Firstly, I intended to set out some of the distinctive views of Henry Giroux and associates in the Critical Theory of Henry Giroux. This includes their concepts of 'the transformative and 'public' intellectual': their attack on the limited problematising emancipatory goal of much radical theorising; their attack on the politically limiting and weakening liberal pluralism of some post-modernists and modernists; their associated critique of uncritical acceptance of difference; student experience and voice; their call for critical utopianism, and their defence of the transformative role of the teacher.

Secondly, in 'Criticism of Giroux by the Madison School - Kenneth Zeichner, Tom Popkewitz, and Dan Liston', I highlight their attack on Giroux's notion of organic intellectual, and on his alleged denial of intellectual and student autonomy by his relatively predesigned political project.

Thirdly, I criticise what is, in many ways, an admirably trenchant, lucid and informed paper by John Smyth. While the words are combative I find the critique in the paper less so, fitting to some extent (though he might deny it) into what is in some respects a pessimistic social reproductionist Radical Left model. This is to say that here I am identifying Smyth within what I am suggesting in a third Radical Left model, admirable on analysis and critique, combative in tone, showing little sympathy with the pluralistic autonomistic stance of Zeichner and associates, but also being far more cautious about the possibility of, and possibility of effectiveness of, critical utopian transformative action by teachers as organic intellectuals.

Along with other Radical Left and neo-Marxist analysts, Giroux asserts that teacher education programs are designed to create intellectuals whose social function is primarily to sustain and legitimate the status quo. However he attacks:

the failure of left educators to move beyond...the language of critique... (which) fails to define teacher education as part of an extended counterpublic sphere... and tends to remain trapped within the logic of social reproduction... their language fails to grasp and acknowledge the concept of counter-hegemony. (Giroux, H. 1988, pp. 161-3)

Giroux and McLaren (1991, p. 156) criticised 'orthodox radical educational theorists whose work hovers over, rather than directly engaging the contradictions of the social order that their efforts seek to transform'. They attack what they see as the overly deterministic reproduction theorists. For Giroux and McLaren (1991, p. 157):

the programmatic impetus of much radical educational reform remains fettered by the limited emancipatory guard of making 'the everyday problematic'...the language of critique that informs much radical theorising is overly individualistic, Eurocentric, and reproductive, radical educators fail to acknowledge that the struggle for democracy, in the larger sense of transforming our society and our democratic political sphere, takes political and ethical precedence over making teachers more adept at deconstructive 'double readings'.

They critique those who have 'failed to develop a radical notion of hope and possibility', indeed those such as Dan Liston who they see as anti-utopian. They criticise Liston (1988) as presenting 'a vision of education driven by a college into a dystopian form of Science'.

Having attacked Radical Left social reproductionists, Giroux also criticises the pluralistic autonomistic school of Radical Left Critical theorists associated with Zeichner.

Giroux (1991, p. 117) attacks such of his critics in ('Postmodern Education') as 'critical pedagogy at its worst'...closer... the liberal democratic tradition in which teaching is reduced to getting students merely to express or access their own experience... a banal, unproblematic notion of facilitation, self-actualisation, self-consciousness. 'It is not enough for teachers merely to affirm critically their student's histories, experiences and stories... this is to run the risk of idealising and romanticising them' (Giroux, H. and Arowowitz, S. 1991, p. 130)

While rejecting 'the postmodernism of reaction' associated with Baudrillard and Lyotard as nihilistic, he also attacks (liberal) postmodernism (and, I would say the same applies to liberal
modernism) 'for democratising the notion of difference in a way that echoes a type of viable liberal pluralism...difference often slips into a theoretically harmless and politically deracinated notion of pastiche'.

Within the British educational context similar comments can be made about multi-culturalism as opposed to anti-racism, an argument I tried to develop in Chapter Two of Hessari and Hill (1989) (though regrettable not in the chapters developing classroom activities), and one made, for example, by the Inner London Education Authority (1985b).

Multi-culturalism can be recognised as an advance over assimilationism but it is not enough. Giroux's (1991, p. 51) position on 'difference' is similar. While it is an advance on a mono-cultural denial of 'difference', an undiscriminating plural approach is precisely that, undiscriminating and uncritical: to acknowledge different forms of literacy is not to suggest that they should all be given equal weight. On the contrary...their differences are to be weighed against the capacity they confer for enabling people to locate themselves in their own histories while simultaneously establishing the conditions for them to function as a part of a wider democratic culture. The represents a form of literacy that is not merely epistemological but also deeply political and eminently pedagogical.

Giroux (1991, p. 108) and his associates are insistent on the necessity of the political and transformative role of the teacher. With Aronowitz he writes:

Education workers must take seriously the articulation of a morality that posits a language of public life, of emancipatory community, and individual and social commitment...A discourse on morality is important...it points to the need to educate students to fight and struggle in order to advance the discourse and principles of a critical democracy.

In this enterprise: educators need to take up the task of redefining educational leadership through forms of social criticism, civic courage, and public engagement that allow them to expand oppositional space...both within and outside of school - which increasingly challenge the ideological representation and relations of power that undermine democratic public life.

Giroux (1983c, pp. 202-3) sets out in more concrete terms what students need to actually learn.

Students should learn not only how to weigh the existing society against its own claims, they should also be taught to think and act in ways that speak to different societal possibilities and ways of living. But if the development of civic courage is the bed-rock of an emancipatory mode of citizenship education, it will have to rest on a number of pedagogical assumptions and practices that need to be somewhat clarified.

1. First, the active nature of students' participation in the learning process must be stressed. This means that transmission modes of pedagogy must be replaced by classroom social relationships in which students are able to challenge, engage, and question the form and substance of the learning process.

2. Second, student must be taught to think critically. Depending on course upon grade levels, students can learn to juxtapose different world views against the truth claims that each of them makes.

3. Third, the development of a critical mode of reasoning must be used to enable students to appropriate their own histories, i.e. to delve into their own biographies and systems of meaning. That is, a critical pedagogy must provide the conditions that give students the opportunity to speak with their own voices, to authenticate their own experiences.

4. They must learn how values are embedded in the very texture of human life, how they are transmitted, and what interests they support regarding the quality of human existence.

5. Fifth, students must learn about the structural and ideological forces that influence and restrict their lives. Dennis Gleson and Geoff Witty talk to this issue when analysing the role social studies can play in addressing it:

A radical conception of social studies starts with the recognition that social processes, both within and outside of school, influence and restrict the life chances of many students. What social studies can do is to help them become more aware of their assumptions and more politically articulate in the expression of what it is they want out of life. This can direct them towards an active exploration of why the social world resists and frustrates their wishes and how social action may focus upon such constraints.

Tom Popkewitz (1991, p. 231) criticised Giroux's concept of 'transformative intellectual'. Popkewitz attacks what he calls "popularist scholarship (which) accepts global dualisms between the oppressor and the oppressed...asserting the researcher's direct attachment to...oppositional social movements. The category of progressive is assigned to the practices associated with oppressed groups".

A very brief summary of Popkewitz's, and indeed Ken Zeichner's, depiction of critical theorists such as Giroux, that they regard as essentially antipathetic the relationship in Giroux's thesis between:

1. political commitment and the pedagogy of a political project with prefigured aims on the one hand; with

2. the democratic development of individual autonomy of the intellectual. "The engagement of the intellectual is continually juxtaposed with the struggle for autonomy" (Popkewitz, T., 1991, p. 241).

3. the democratic development of individual autonomy of the learner, the student, faced with a political project and commitment, with the desire of the teacher as intellectual to 'transform' his or her students.

Ken Zeichner (1987, p. 25) writing with Dan Liston also criticises the overt political project and agenda of Giroux.

In the major article they co-wrote setting out their three levels of reflection, Liston and McLaren suggest that "in Giroux and McLaren's attempt to 'politicise' schooling we feel they blur an essential distinction between the teacher as educator and the teacher as political activist".

Zeichner and Liston emphasise, against Giroux, it is important to note that "reflexive teaching" is not viewed as synonymous with any particular changes in teacher behaviours. The program seeks to help student teachers become more aware of themselves and their environments in a way that changes their perceptions of what is possible. The hope is that these expanded perceptions and an enhanced 'cultural literacy' (Bowers 1990) will affect the degree of 'reflectiveness' expressed in student teacher actions, and that more reflective actions will lead to greater benefits for the teacher and for all of his or her pupils.

I now want to amplify on differences among left educators, which I have categorised above. In particular I wish to examine the Zeichner-Giroux argument, which essentially is about the role of teachers as 'transformative' intellectuals. Liston and Zeichner (1987, p. 117-8) do associate themselves with 'the important role for teacher education' in efforts to bring about more emancipatory educational practices in our public schools believing that a more critically oriented approach to teacher education, in conjunction with other educational, political and economic reforms, could help to create a 'more democratic and just society'. But they 'caution against the portrayal of teachers as political activists within the classroom. While they themselves have proposed reflective, critical, or emancipatory programs...motivated by a specific desire to rectify social and educational inequality and injustice...they believe that, by definition, a reflective and critical approach to the moral education of teachers would:

recognise this plurally and enable future teachers to identify and choose between sufficiently articulated and reasonably distinct moral positions...the goal of a reflective and critically oriented teacher education program is certainly not moral inculcation, but rather a reflective examination of educational goals and alternative course of action.

(Weinstein, D. and Zeichner, K. 1987, pp. 121-2)

While they are 'highly cautious' about (Giroux and McLaren's) 'civic minded action within the classroom' Liston and Zeichner (1987, pp. 124-5) encourage it outside the classroom' believing that 'teacher education programs should begin to examine the conditions of schooling and teachers' work inhibit prospective teachers' chosen goals' and Liston and Zeichner (1987, pp. 133-4) argue for a much more aggressive political stance by teacher educators not within the classrooms, but 'in relation' to the organisations and agencies that allocate resources and rewards affecting teacher education programs' and in efforts to democratising schools that would give teachers and parents greater control over the school curriculum and school management. They do however agree, with Giroux (and McLaren...
and Aronowitz) that 'the social relations and pedagogical practices within programs need to reflect the emancipatory practices that teacher educators seek to establish in...schools'.

Liston and Zeichner (1987, pp. 126-7) locate themselves within 'the Radical Tradition in Teacher Education'. They 'share a set of commitments and common purposes which reflect the emancipatory practices that teacher educators' - except within the classroom.

7. RADICAL LEFT REPRODUCTIONIST ASPECTS OF JOHN SMYTH'S ANALYSIS

In this section I wish briefly to rehearse the major criticisms of the economic reproductive model associated, for example, with the correspondence theory of Bowles and Gintis, and the material aspects of Althusser's notion of ideology, and the cultural reproductive model of Bourdieu.

Such criticisms are very clearly and explicitly set out in Mike Cole (1990), in Henry Giroux (1983b) work by Mike Apple (1982) and Geoff Whitty (1981).

I wish then to locate some aspects of John Smyth's forcible and incisive analysis of late capitalist educational developments within the reproductionist model and to critique those aspects.

Firstly, then a very brief critique of reproduction theory taken from Giroux.

Reproduction theorists have over emphasised the idea of domination in their analyses and have failed to provide any major insights into how teachers, students, and other human agents come together within specific historical and social contexts in order to both make and reproduce the conditions of their existence. More specifically, reproduction accounts of schooling have continually patterned themselves after structural-functionalism from which the idea that history is made 'behind the backs' of the members of society. The idea that people do make history, including its constraints, has been neglected. Indeed, human subjects generally 'disappear' amidst a theory that leaves no room for moments of self-creation, mediation, and resistance. These accounts often leave us with a view of schooling and domination that appears to have been pressed out of an Orwellian fantasy - schools are often viewed as factories or prisons, teachers and students alike act merely as pawns and role bearers constrained by the logic and practical social practices of the capitalist system.

By downplaying the importance of human agency and the notion of resistance, reproduction theories offer little hope for challenging and changing the repressive features of schooling. By ignoring the contradictions that exist in schools, these theories not only dissolve human agency, they unknowingly provide a rationale for not examining teachers and students in concrete school settings. Thus, they miss the opportunity to determine whether there is a substantial difference between the existence of various structural and ideological modes of domination and their actual unfolding and effects.

Whereas reproduction theorists focus almost exclusively on the 'cultural', they ignore the ways in which social practices of the capitalist system.

Certainly in Britain, with the imposition of the (new) National Curriculum for Schools in England and Wales following the 1988 Education Reform Act, and the effective introduction of a tighter National Curriculum for Initial Teacher Education in England and Wales following the 1989 CATE criteria and the 1991 National Curriculum Council document on Initial Teacher Education, the scope for resistance, for the development and dissemination of oppositional discourses is restricted. Smyth is correct in asserting the restrictive nature of such changes. However many writers have shown, theoretically, how spaces for counter-hegemonic activity remains - 'structures of desire that hold A and G - where some British departments of teacher education can and do subvert government wishes concerning the curriculum and seize the opportunities afforded by restructuring a system (Whitty, 1981). How restructuring of school budgetary and management powers as part of the British Government's Local Management of Schools (a classic example of Smith's decentralising from above) can be used for a different agenda, one of autogestion or of local workers' democratic control (Hill, D., 1991b).

Smyth (1991, p. 29) calls for teachers to link consciousness about the processes that inform the day-to-day aspects of their teaching with the older political and social realities for then they are able to transcend self-blame for things that don't work out and to see that perhaps their causation may more properly lie in the social injustices and palpable injustices of society.

Certainly these concepts are never articulated in a concretely referenced discussion of political transformation led to a realisable, local political programme, but just float airily serving perhaps as a rhetoric of inspiration for those so constituted to need it but devoid of any practical function.

I wish to make a four-fold criticism of this stance, relating to:

i. a rhetoric of inspiration,
ii. a rhetoric of popularisation,
iii. the linking of transformatory rhetoric to political programmes, and
iv. the validity of intellectualism.

1. Firstly, a rhetoric of inspiration has a valuable function per se for any political/ideological/educational project, in engaging emotion and desire, in thrilling, in motivating. To say that ideology is related to the domain of the affective is to assert that ideology must be understood as operating within a politics of feeling - 'the politics of desire that holds E and G' (Giroux and McLaren, P., 1991, p. 190). Certainly some of my own writing is intentionally written in the rhetorical register.

At a non-critical theory level Benjamin Bloom links the affective and cognitive domains of intellectual development, and it is a commonplace of political science analysis of the politics of charisma that links excitement, feeling high, a pleasurable body state, the production of extra adrenalin - that is, the psychology and physiology of pleasure, with cognitive messages.

2. Secondly, a rhetoric of inspiration it has a valuable function in popularising, in
attracting and moving those particular audiences 'so constituted to need it,' or so constituted as likely to develop a desire to need it.

The initial section of this paper refers to the success of the Radical Right in using three different levels of discourse for three different audiences - the academic, the three levels of the press, (highbrow/quality, middle brow, and popular press), the Party political, each reacting to and feeding on the other, to popularise and disseminate the vocabulary and concepts of a discourse of derision, (about the Loony Left, schools, 'teacher training'), together with the vocabulary and concepts of its own rhetoric of inspiration.

3. Thirdly, while it may be true that such emancipatory concepts are frequently not tied to a realised local political programme, to claim that they are 'never' so articulated is either sloppy writing or sloppily and under-informed. The 'Keep Strong' movement and document of the Chicago Common Grand Network in 1987 influenced by Henry Giroux, is one example of Giroux linking theory with concrete and popularising local action and programme (ILEA 1984, ILEA 1985b).

The Inner London Education Authority's two major reports aimed at combating under achievement by working class children, 'Improving Secondary Schools' (The Hargreaves Report), and 'Improving Primary Schools', (The Thomas Report), and various of the anti-elitist, anti-hierarchical education reforms of the 1974-1976 Portuguese Revolutionary Governments informed and influenced large, and draws in particular on the work of Henry Giroux and his associates.

4. My fourth criticism of Nash and of Smyth who圃promise/hs/him, is the implication of intellectualism of such statements which might for all I am aware, stem from either a 'workerism' which not only privileges but over-privileges proletariatianism in experience and expression, or simply from a set of unfortunate experiences of intellectual vanguardists or intellectuals who de float airy, wishing to critique and or theorise without seeking an influence or part in a political project, i.e. without being public intellectuals. While such criticism as Smyth's and Nash's may well be valid in many cases, it does come close to the hypostatising of intellectuals as ivory tower theorists, removed from mundane concerns and exigencies of everyday life (Giroux, H. and McLaren, P. 1987, p. 61).

WHAT BRITISH INITIAL TEACHER EDUCATION NEEDS: A RADICAL LEFT IDEOLOGICAL PERSPECTIVE

The critique and proposals of the Radical Left as a whole differ from those of the Centre and the Radical Right. It rejects total school-sitting/basing of ITE and it also rejects overwhelming school-based ITE. It rejects assaults seeking to displace, replace, and control critical reflection, social justice and egalitarianism. The Radical Left does accept reform in ITE. But the rationale and suggested implementation of, for example, increased use of school focussing, or a national curriculum for ITE, differ from those of the Radical Right and the Centre ideological perspectives. They are drawn from different ideological perspectives and have different intentions.

Initial Teacher Education should be based on:

i. resistance to totally or overwhelmingly school-based teacher education i.e. retaining a substantial college-based role;

ii. the development of macro and micro-theory regarding teaching and learning, in which the socio-political, economic and ideological and cultural contexts of schooling and education are made explicit;

iii. the development of effective, skilled, classroom teachers able to interrelate and critique theory and practice - their own and that of others.

iv. the development of teachers as critical 'transformative intellectuals' and democratic participative professionals and citizens committed to a particular moral and social justice based on an interrogated and critical cultural diversity (social class, racial, gender, sexuality) radical democratic egalitarian political project.

These points reflect a particular view of the general and immediate concept of the 'reflective practitioner'. As has been elaborated this term, like the term 'democratic' or 'community involvement', has opened to a variety of interpretations in USA and Britain. This last point is an attempt at increased, political precision, beyond the all too easy term of the 'reflective practitioner' and draws in particular on the work of Henry Giroux and his associates.

A number of Initial Teacher Education courses seek to make themselves on the above principles, or at least, on the first three of those principles, that is to say, at Zeichner's second and third levels of reflection. This position emerges also in a number of critical Initial Teacher Education courses which are briefly set out in a number of recent books and articles. Examples are Clay, Cole and Hill’s (1990); Cole, Clay Hill’s (1991), Cole, Sikes and Hill in Mike (1990) and Troyna and Sikes (1989) which describes the BA and QTS (Qualified Teacher Status) at Warwick University based on biographical life histories in the conviction that personal experiences and understanding provide an ideal basis from which to begin to explore why we, and others hold particular beliefs and values and why we, and they, do things in certain ways. Two other courses are set out in Hill, D. (1989). The mandatory third year 60 hour B.Ed. course at West Sussex Institute of Higher Education ‘Schools and Society’ (1988-89), and the optional 20 hour Year One and Two B.Ed. courses ‘Contexts for Learning’ at (1987-89) at Brighton Polytechnic. The PGCE course at Sheffield University attempts an innovative approach to the formation of the reflective, critical teacher and is described in Rudderick, J. and Wellington, J. (1989).

Such courses are clear attempts at combating current anti-theoretical and anti-critical attacks on British teacher education. In Troyna and Sikes (1990) words:

Training students to be more functionaries in our schools rather than educating them to assume a more creative and, dare we say it, critical role, would be to undermine both the industry and the possibility of doing justice to the moment. But should we abandon pre-service education entirely and hand the reins over entirely to practising teachers? We think not.

Research evidence suggests that many teachers continue, consciously or otherwise, to make important decisions about the organisation, orientation, and delivery of the formal and informal curricula on grounds which are racist, sexist and discriminatory in a range of significant ways. Should we therefore succumb to a system of teacher education/training in which these practices could well be reproduced systematically? Or should we, instead, develop re-service courses geared towards the development of a teaching force which reflects in a critical manner on taken-for-granted assumptions, which can articulate reasons for contesting some of the conventional wisdoms about pupils, their interests and abilities, and which, ultimately, might influence future cohorts? In short, shouldn’t we be encouraging students to be intellectual about being practice?
CONCLUSION

There is a very brief conclusion to this paper. It is that under Radical Right governments, media offensive attempts at strengthening control and hegemony over, and conforming, the schooling and teacher education ideological state apparatuses, the Left, has, with few exceptions, vacated the ideological battlefield and got 'left in the Centre'. This is true of the case of Gordon, A. (1991) Teacher and pupil in a scheme. The aim is to improve standards theories expounded in a class of her own glowing report included the following 2. Gordon, A. (1991) Teacher and pupil in a scheme. The aim is to improve standards theories expounded in a class of her own glowing report included the following.
