GEOGRAPHIC LOCATION OF TEACHERS RESPONDING TO SURVEY

TOTAL NUMBER of RESPONDENTS - 120

The number of respondents from each region is shown in:

- Kimberley Region: 11
- Pilbara Region: 14
- Metropolitan Region: 53
- Geraldton Region: 3
- Goldfields Region: 14
- Midland Region: 5
- Yilgarn Region: 6
- South West Great Southern Regions: 28
INTRODUCTION

The composition of the student population in secondary schools in Western Australia has changed considerably in recent years. The overall increase in the number of students being retained in school at all levels of secondary education has resulted in a growing number of children of Aboriginal/part Aboriginal and/or migrant parents in the secondary streams. These children who previously tended to finish their schooling in the primary school are now entering secondary schools to complete their education.

A beginning teacher goes into his first school with certain expectations of the conditions under which he will work, what his classes will be like, what the students' needs are and the nature of anticipated difficulties. He hopes his College experience has prepared him to meet these needs.

Answers to the following questions should provide useful information.

- To what extent is the present College programme adequate in meeting the needs of beginning teachers?
- What are the beginning teacher's expectations, needs and/or difficulties in teaching classes that include children of Aboriginal and/or migrant parents?
- What is the beginning teacher's perception of the ways in which his/her College experience has helped to meet those needs?
- What suggestions can the beginning teacher contribute as to further ways the College could help meet those needs?
INVESTIGATION

The survey was directed to all teachers who graduated with a Diploma of Teaching from Nedlands College of Advanced Education in 1976 and 1977 who were subsequently appointed to schools and had completed at least one year of teaching.

THE AIMS of the STUDY

- To ascertain the number of beginning teachers who teach classes in which there are students of different cultural backgrounds.
- To identify the nature of cultural differences -
  - Aboriginal/part Aboriginal
  - Migrant from non English speaking countries
  - Migrant from English speaking countries.
- To examine the extent of the problem:-
  - How many teachers, how many students in how many schools?
  - The location, geographic and social context.
- To solicit interest in a more detailed follow up study to obtain information relating to beginning teachers' expectations, needs and difficulties, perceptions of the College course, and, suggestions as to ways the College could more adequately prepare teachers for their in field experience.

The Questionnaire (see Appendix B) with accompanying letter was sent to 390 teachers who graduated from this College in 1976 and 1977. Of these, 40 were returned unclaimed. One hundred and twenty teachers responded to the request to complete the questionnaire. In addition to providing answers to the questions asked, many teachers made comments that add considerable flavour to the information given.
RESULTS

The results are presented in two sections.

PART ONE: A series of tables displaying quantitative data.

PART TWO: An analysis of statements made in response to the questions:

- Do you believe these children disadvantaged?
  (82 statements, Appendix A (1))
- How do you assess your College course?
  (85 statements, Appendix A (2))
- Are you willing to participate in a follow up?
  (47 statements, Appendix A (3))

PART TWO

AN ANALYSIS of DATA and TEACHERS' PERCEPTIONS

THE SAMPLE

The critical analysis of the data should be viewed in the context of the adequacy of the sample itself.

Official College statistics indicate that 288 students entered their final year in 1976 and 356 entered their final year in 1977. This provides a total of 644 potential graduates for the two years surveyed. Of these, 521 were listed by name on the College Graduation Programme for the respective years.

The Education Department Printout for 1979 listed the schools to which graduates named were currently appointed. Only 350 graduates for 1976 and 1977 were located in this way, and to them this survey was directed. Of these 120 responded to the questionnaire.

TABLE 17 Response Rate to the Survey

</tr>
</tbody>
</table>

Three ex College students who contacted College staff after the survey was complete indicated they had not received the questionnaire. A check revealed one of the questionnaires had been incorrectly addressed. This suggests a hidden number among the non-respondents were the result of a failure of the survey to reach the intended recipient.

i.e. (a) "unclaimed" at address to which sent but not returned to sender.
(b) mail which reached school not passed on to staff.
(c) poor service and delays to remote areas.
Despite these hazards there appears to have been a considerable spread among the respondents both in regard to distribution within regions and across specific teaching fields. The actual percentage response rate was highest in the goldfields region and lowest in the metropolitan regions.

</tbody>
</table>

It has not been possible to identify the non-respondents according to their teaching fields so an attempt has been made to provide comparative figures within teaching departments using the breakdown figures available for the potential graduates for 1976 and 1977, i.e. 644.

Due to changes in College course structure between 1976 and 1977 some comparisons can only be related to the 1977 figures. A comparison of Columns 4 and 10 in Table 19 shows for 1977 the extent to which the ratio of respondents within various teaching field matches the population from which respondents came.

</table>

* In 1976 General Studies (n=28) included English, Mathematics, Science, and Social Science. The specific numbers credited to these teaching departments in that year relate to students doing special courses including some entering from other institutions with advanced standing.
The table shows a considerable degree of congruence between the composition of the group of potential graduates for 1977 and the 1977 graduates who responded to the survey. Columns 13 and 14 show the response rate within each teaching field. The highest response came from teachers of Home Economics. Teachers of Business Education, English (including Communications), Library Studies, Manual Arts, Mathematics, Physical/Health Education, Science and Social Science formed a middle group. There was a relatively low response rate from teachers of Art, Languages and Music.

THE EXTENT of TEACHER CONTACT with STUDENTS of ABORIGINAL or MIGRANT BACKGROUND (see Tables 10 - 13)

Of the 120 teachers who responded to the survey eight indicated they had no classroom contact with students of Aboriginal or non-English speaking migrant background. When students of English speaking migrant background were considered the number of teachers having no contact with students who were culturally different was reduced to five. Table 12 shows the number of classes in which Aboriginal and non-English migrant students are present.

Thirteen classes have ten or more aboriginal students including six wholly aboriginal classes.

Twenty-three classes have ten or more migrant students including one wholly migrant class.

Thus, while few classes are predominantly aboriginal or migrant ie. have ten or more such students a large number of classes included minority groups - aboriginal only, migrant only, both aboriginal and migrant - within classes. Two teachers referred specifically to classes in which the "white" Australian student was in the minority. More than half of the respondents indicated they had contact with from 1-6 students of other than Anglo-Australian background. The significance of this information is not so much in the enumeration of instances as in the teachers' perceptions of the ways in which having a culturally different student in the class may change both the academic and social dynamics of the classroom situation in ways that affect the culturally different student, the rest of the class; and, the classroom teacher in coping with the needs and demands of each other.
TEACHERS' PERCEPTION of STUDENT DISADVANTAGE (see Table 14)

Just over fifty percent of the respondents stated that culturally different students are disadvantaged in the school situation. Of the thirty teachers who stated these students were not disadvantaged and the fifteen who were unsure, fourteen teachers added comments that indicated they saw these students disadvantaged by factors external to the school - home influences, cultural conditioning and language background. This appears to indicate some interpreted the question to ask:

Do you believe these children are disadvantaged by the school?

rather than AT school, as was the intention of the question. Comments relating to the ways in which students are disadvantaged fall into four areas:

1. THE SCHOOL SYSTEM
   The values implied, the relevance of levels and subjects offered, Appendix A (1) Items 2, 3, 14, 21, 49, 57, 72, 74.

2. HOME BACKGROUND and CULTURAL CONDITIONING of the STUDENT
   Appendix A (1) Items 5, 12, 22, 28, 29, 31, 36, 48, 58, 79.

3. LANGUAGE DIFFICULTIES
   Including both the parents knowledge of English and the personal proficiency of the student. Appendix A (1) Items 9, 13, 37, 42, 45, 47, 50, 53, 55, 59, 65, 66, 68, 75.

4. SOCIAL INFLUENCES
   Religious customs and social skills, perceived as being different or strange; acceptance: experience antagonism and isolation. Appendix A (1) Items 18, 20, 28, 34, 41, 79.

A complete list of comments made is recorded in Appendix A (1).

Comments throughout indicated that respondents saw aboriginal students generally more disadvantaged than migrant students. However, the nature of the disadvantage shifted from an emphasis on difficulties arising from the school system and home background for aboriginal students to an emphasis on language difficulties and social influences for migrant students.
COLLEGE PREPARATION for TEACHING STUDENTS from DIFFERENT CULTURAL BACKGROUNDS (see Table 15)

When asked to assess the adequacy of their College course to fit them to teach students who are culturally different, eighty three teachers judged the course they had undertaken to be inadequate. The degree of inadequacy ranged from the bald statement 

_Nothing at all done in the area_  
(Appendix A (2) Item 25) to the more apologetic 

_No real blame attached to Nedlands College, the situation at_  
is something only firsthand experience can really remedy  
(Appendix A (2) Item 2)

Of those who assessed the College as adequate there were teachers who:

(a) added the qualification:  
adequate as a beginning. Extra studies best suited to a degree course  
(Appendix A (2) Item 3);

(b) had encountered no problems (Appendix A (2) Item 57, 79);

(c) saw coping as a problem for the individual, not something taught  
(Appendix A (2) Items 10, 32, 36, 57, 74);

(d) pointed to specific unit/subject areas in which they felt good background knowledge had been provided (Appendix A (2) Items 21, 28, 56, 79, 78, 80).

The notion that preparation for teaching students of different cultural backgrounds was not something that could be taught was also mentioned by teachers who stated that the course was inadequate (Appendix A (2) Items 8, 20).

The specific comments in relation to the adequacy of the College course group around several themes:

1. **THE EXISTING COURSE**

_I feel the College course undertaken by me in no way prepared me to teach children of a different ethnic/cultural background_  
reported a Social Science teacher from . (Appendix A (2) Item 84). These sentiments were echoed by a number of others (Appendix A (2) Items 7, 13, 18, 22, 24, 25, 35, 39, 41, 43, 52, 53, 71).
2. PRACTICAL TRAINING

The need for a practical orientation was emphasised several times in comments such as

- There was insufficient practical preparation

- College students would benefit from first-hand information, such as lectures by individuals from different cultures

- Frequent contact with Aboriginal schools and communities

(Appendix A (2) Items 1, 4, 11, 13, 18, 27, 29, 39, 47, 58, 66, 68, 82).

3. CURRICULUM NEEDS

A Librarian from suggested

there should be at least one Education unit in Aboriginal Education in our Diploma of Teaching course

(Appendix A (2) Item 2).

Similar suggestions were made by others (Items 42, 65). Another suggestion was that

- Time should be devoted to showing teachers how to cope with student deficiencies in reading

(Item 60). The need for training in remedial work was mentioned several times (Items 18, 27, 33). One teacher suggested

- A second language should be included in the course

(Item 81).

4. ATTITUDE DEVELOPMENT

The awareness of individual needs, understanding of cultural differences, and, teachers' expectations and the reality were other aspects in which the College could provide more adequate preparation.

- We were taught to teach the average student

(Items 26, 45, 50).

- I didn't understand the different attitudes to people, school and society that the different members of the Aboriginal community would have

(Item 64). Related comments are also recorded (Items 12, 14, 19, 30, 31, 49, 54, 55, 59, 84).

- I had no idea of the type of problems faced in this school

reported a Science teacher from

(Item 16).
FOLLOW UP

Through this initial survey it was hoped to clarify the extent to which beginning teachers were involved in/prepared for classroom contact with students who are culturally different and define some of the broader issues.

It was expected that a follow up study would be required to obtain more detailed and specific information. Respondents were therefore invited to indicate their willingness to participate in the follow up study. This information itself highlights some of the respondents' perceptions of the problem and enables an analysis of some of the motivations for both willingness and unwillingness to participate in a follow up study. In addition it provides a means of determining the composition of the intended sample in terms of geographic regions, teaching field, perceptions of advantage/disadvantage for students, perceptions of adequacy/inadequacy of College preparation.

Seventy six teachers indicated their willingness to participate in a follow up study; twenty eight did not wish to participate in a follow up and two were undecided (see Table 16). Reasons given for not wishing to participate in a follow up included those who felt:

(a) they had insufficient exposure to the situation (n = 5);
(b) they were not experiencing any problems (n = 3);
(c) their special circumstances (n = 3)
   (i) being of migrant backgrounds;
   (ii) not following set curricular;
   (iii) previous experience with aboriginal/migrant groups rendered their comment invalid;
(d) isolated from common experience (n = 2). One teacher from and one from expressed this feeling.
Eighteen offered no explanation.
The attitudes on the questions of student disadvantage and College course adequacy of those not wishing to be involved in the follow up are worth noting as also is the geographic distribution of these teachers.

It is necessary to ask in what respects teachers who indicated their willingness to participate in the follow up study differed from those who did not share this willingness.

To what extent do they differ in their perceptions of student disadvantage?
Do they differ in respect to their views on the adequacy of the College course?
Do they represent a different section of the teaching community i.e. do their teaching fields differ significantly from those not wishing to participate in the follow up?
Does the geographic location influence their attitudes?
The information in Table 21 suggests that geographic location does not separate the willing from the not willing. It may be noted, however, that there is a higher percentage of willing in some areas e.g. Goldfields and Pilbara regions. Table 22 shows the distribution of attitudes in respect of student disadvantage and College course adequacy by those willing to participate in a follow up study.

TOTAL 76 28 2 7 7 120

*Minor discrepancies of this table with Table 19 are due to teachers actually teaching in an area other than their major field studied at College.
The teachers willing to participate in a follow up study provide a relatively representative sample across subject areas and in relation to geographic location.

One question remains. That is, to what extent have the questions intended as the basis for the follow up study already been answered. The intention of the follow up study was to investigate:

(a) beginning teachers' expectations, perceptions of needs and difficulties in teaching classes that include children of Aboriginal/Migrant background;

(b) beginning teachers' assessment of the ways their College experience helped meet those needs; and,

(c) beginning teachers' contributions to further ways the College could meet those needs.

In light of the information provided by way of spontaneous comments by respondents relating directly to these areas, it may be necessary to re-examine the purpose for which a follow up is needed, or whether, in fact, a need for a follow up study still remains.

SUMMARY and IMPLICATIONS

The results of this survey indicate that a substantial number of beginning teachers may have contact with classes that include minority groups of children i.e. one to six of either Aboriginal and/or non English speaking Migrant background.

It is likely that these teachers are distributed throughout the identified regional divisions and cover most of the possible teaching subject areas.

The significance of this information is not so much in the enumeration of instances as in the teachers' perceptions of the ways in which having a culturally different student in the class may change both the academic and social dynamics of the classroom situation.
Comments made by these teachers indicate that they see Aboriginal students as generally more disadvantaged than Migrant students. However, there is a shift of emphasis concerning the nature of the perceived disadvantages between the two groups. For Aboriginal students, difficulties are seen to arise, in the main, from the school system and the home background, whereas, in the case of Migrant students, language difficulties and social influences are more likely to be emphasised as the source of the problems that arise.

Little was said by these teachers in relation to students of English speaking Migrant background but there are some indications that these children, too, experience varying degrees of social discomfort due to their different backgrounds.

Most of the teachers responding to this survey reported having little awareness of the needs and difficulties of children of Aboriginal and Migrant background prior to their first teaching appointments. They generally reflected an expectation of the normal class.

Their College experience, at best, provided only limited assistance in the areas they now perceive as needs. The teachers suggested that the College may better meet such needs by way of:

(a) introducing special units of study;
(b) greater emphasis on practical involvement during training; and,
(c) direct experience through lectures by individuals from different cultures and contact with Aboriginal and Migrant student groups and communities.

There are indications that the beginning teachers believe they would benefit from a training programme that included:

(a) the use of special techniques to overcome learning difficulties e.g. remedial programmes including the teaching of reading;
(b) an awareness of and information concerning cultural differences; and,
(c) an appreciation of how language shapes the way one thinks and influences the grasp of a second language.
The main thrust of this study has been to create an awareness of the extent and nature of problems specific to the teaching of children of different cultural backgrounds and to provide a basis upon which to evaluate existing College courses and establish need priorities for the future.

However, from the information provided by respondents it is clear that to focus on these aspects alone will leave many of the teachers who participated in the survey disappointed. These teachers, in 1980 - 1981 will enter their third and fourth years as teachers still aware of the inadequacies of their training and experience in the area of cultural differences unless positive action can be taken to meet their needs.

In conclusion, therefore, it seems pertinent to note that the study also revealed that a number of these teachers are located in regional clusters e.g. Eastern Goldfields, and toward these groups it may be appropriate to direct special assistance in the form of in-service programmes/external studies to in some way ameliorate their sense of isolation.
Do you BELIEVE these CHILDREN are DISADVANTAGED?

</tbody>
</table>
11 NO Not disadvantaged, all of them are well integrated and have no language problem.
Senior High School, Metropolitan Region, Science.

12 YES Many of the Aboriginal students here are still fringe dwellers. Their parents are still living in the camp situation. These students have a very different value system to that which is instilled in most European people and taken for granted.
District High School, Goldfields Region, Health Education.

13 UNSURE I feel that Chinese and Russian students are disadvantaged because they cannot understand the language, especially slang, and the activities we do e.g. jazz ballet.
District High School, Yilgarn Region, Physical Education.

14 YES A lot of these students do not seem to have respect for authority or the education system.
Senior High School, Metropolitan Region, Library.

15 YES Non-English speaking are definitely disadvantaged. Aboriginal children definitely disadvantaged. English speaking not very disadvantaged.
Senior High School, Metropolitan Region, Science.

16 YES But not all of them, the majority.
Senior High School, Metropolitan, English.

17 YES As is very isolated, town sport is one of the outlets for children, the sport and subjects taught in the school are very Australian.
High School, Pilbara Region, Manual Arts.

18 YES Ability to communicate effectively is lacking due to language differences and sometimes antagonism between students of different cultural backgrounds.
District High School, Southern Region, English.

19 YES Students of Christmas Island descent 'fasting days'.
Students of Malay/Vietnamese background language barrier. Lack of understanding of customs of each country.
High School, Pilbara Region, Manual Arts.

20 YES In terms of language and acceptance by the other pupils. The Christmas Islanders are generally keener to learn than Aboriginal children but miss out more socially.
Senior High School, Southern Region, English.

21 YES Generally these students are behind in their subjects and find it difficult to catch up for many reasons. They then lose interest and motivation.
Agricultural School, Southern Region, Library.
Not very noticeable with white English and non-English speaking children, a slight problem to a disadvantage for Asians. A great problem for Aboriginals especially the semi-nomadic Aboriginals.
District High School, Goldfields Region, Home Economics.

Many of the Italian community from do not seem to mix as easily as other students i.e. socially disadvantaged.
District High School, Southern Region, Social Sciences.

Not so much at because there are many migrant children.
Senior High School, Metropolitan Region, Physical Education/Mathematics.

Students are torn between ethnic culture and middle class Australian culture. The latter seems more attractive than the former. Reading and writing suffer, possibly from language difference.
Senior High School, Southern Region, English.

Difficult to teach to different cultures and expectations.
Senior High School, Pilbara Region, Home Economics.

The Macedonian children assimilate very well and all speak English. They have been in for thirty years and the problem was much greater in the past.
District High School, Southern Region, Physical Education.

Only the Islanders are ill-at-ease, the Aboriginals practically run the place.
District High School, Southern Region, Physical Education.

They are disadvantaged because of the values that they have had pushed on them. The students' attitudes are often very poor and these attitudes are very hard to break because of very strong peer pressure.
Senior High School, Pilbara Region, Manual Arts.

Many are unable to read, social customs are different, leading to conflict with parents and school.
Senior High School, Pilbara Region, Home Economics.

Aboriginal children are particularly disadvantaged.
High School, Southern Region, English.

Except for Chinese girl who began to speak English when she arrived in Australia last year.
Senior High School, Southern Region, Home Economics.

Large numbers of Aboriginals are at disadvantage due to home environment.
District High School, Geraldton Region, Mathematics/Science.

<td>Most have been in Australia long enough to be proficient in our language. Senior High School, Metropolitan Region, Mathematics.</td>
</tr>
</tbody>
</table>
45 YES This of course depends on the parents' attitudes e.g. are they willing to learn English language. 
Senior High School, Southern Region, Physical Education.

46 NO This school has a 3/5 Migrant Education teacher and such a mixed population that these students are reasonably catered for. 
Senior High School, Metropolitan Region, English.

47 YES Language difficulties - students often have to write own notes, hard to make contact with parents, etc. no real difficulties experienced in Physical Education. 
Senior High School, Metropolitan Region, Physical Education.

48 YES Aboriginal children do not see the importance of education as viewed by white society. 
District High School, Goldfields Region, Science/Mathematics.

49 YES Normal instructions and reading offer them great difficulties. 
Senior High School, Metropolitan Region, Science.

50 UNSURE Some cope very well, others have trouble understanding the language because it is not spoken at home and their parents lack of understanding of English and the school system seems to disadvantage the student. 
Senior High School, Metropolitan Region, Science.

51 NO They are capable and keen to learn - Migrant only. 
Senior High School, Metropolitan Region, Mathematics.

52 UNSURE Some obviously benefit from exposure to a new culture. However, many feel different and find it difficult to fit in. 
Senior High School, Metropolitan Region, English/Communications.

53 YES Student in class 'C' came direct from Hong Kong and could not speak any English at first. 
District High School, Goldfields Region, Social Science.

54 YES Mainly in written communication, spelling poor, reading poor - fair. 
Senior High School, Southern Region, Social Science.

55 YES The Italians especially as many had parents who did not speak English at all. 
District High School, Southern Region, English.

56 UNSURE Much depends upon the child himself. Under most circumstances unless there is an obvious language barrier, they do not seem disadvantaged. 
Senior High School, Metropolitan Region, English/Communications.
Through labelling, Aboriginal children sent to project classes, are made to be different to rest of school by classification.
Senior High School, Goldfields Region, Business Education.

This comment does apply to other migrant families as well. The Aboriginal children seem to have a conflict between their own culture and ours. They have different values and expectations to us, hence a source of trouble.
Senior High School, Metropolitan Region, Manual Arts.

It is difficult. When a child uses one language at home, say Dutch and another at school, when parents cannot read school literature.
Senior High School, Metropolitan Region, English/Communications.

Some students spoke almost no English when arriving at the school. Within twelve months of arrival in Australia, language is the only noticeable problem.
High School, Metropolitan Region, Library, Social Science.

Many have been living in Australia for a few years now. They know the other students at school and seem to have very few problems - Migrant.
Senior High School, Pilbara Region, English.

Depends upon level of intelligence of child and parent.
Senior High School, Goldfields Region, Physical Education.

Some are, not all. It depends on how long they have been in the country.
Senior High School, Metropolitan Region, Science/English.

In many cases, especially in Years 9 and 10, Aboriginal students due to peer group pressure and possible parent and social pressure, find school dissatisfying and inappropriate to their needs.
Senior High School, Pilbara Region, English.

Language, yes. This is because there is not enough help in schools for children whose native language is not English. It easily depends on the attitude of the people i.e. students, teacher, friends, etc. around the children. The teacher plays a large part in helping these children integrate and can turn their background into an advantage if handled properly.
Senior High School, Southern Region, French.

The children often miss subtle nuances of the English language which their peers can grasp. Unfamiliarity with social customs hinder participation, causes feelings of 'separateness'.
Senior High School, Metropolitan Region, English.
Many of these students are advantaged because of their knowledge and experience of a different life style. Senior High School, Metropolitan Region, Music.

The only disadvantage is when students come into the school straight from their own countries and must learn language etc. Only two students - Japanese - in this category. Senior High School, Southern Region, Art.

The Christmas Islanders are the only exception due to a language barrier. Their quiet natures and social background make them appear unwilling to ask for assistance until they really get to know you. Senior High School, Southern Region, Home Economics.

In some cases they are and in others they are not, or it depends a lot upon the individual child and how they have learnt to cope. Most have difficulty with social customs. Senior High School, Metropolitan Region, Home Economics.

Some do have problems depending on what sort of background they have. Senior High School, Metropolitan Region, Physical Education.

Life on the reserve is difficult to reconcile with many of the topics covered at school. District High School, Kimberley Region, Business Education.

Many speak little English. They all come to sport. It is one of the few areas where the non-English speaking students mix with others. They are ostracized as they haven't mastered simple throwing/catching skills and no one wants them on their team and then with parents who don't speak English, but they get on O.K. Senior High School, Metropolitan Region, Physical Education.

Perhaps the Aboriginal children are bored because the basic courses are not suited to their needs. District High School, Goldfields Region, Mathematics.

The Italian 'origin' students have difficulty with language. The students from the United Kingdom have no real problems due to this. Senior High School, Metropolitan, Physical Education.

Most have been in Australia all or nearly all their lives and have grown up in our culture as well as part of their own. Senior High School, Metropolitan Region, Science.

These children naturally have a disadvantaged start to their education. Primary School, Metropolitan Region.
78  YES  Because of their difference they are on occasions alienated. District High School, Yilgarn Region, Manual Arts.

79  YES  I feel that the Aboriginal or part-Aboriginal children are the most disadvantaged in that most teachers and also students are not aware of the culture differences and make little allowance for it, my students who are children of migrant parents seem to be disadvantaged very little school-wise, however, racial comments from peers do make them aware of and on occasions embarrassed by their cultural differences. District High School, Southern Region, Mathematics/Science.

80  YES  Aboriginal children, particularly. Senior High School, Goldfields Region, Social Science.

81  UNSURE  Originally they were, but after adjustments and making friends they have settled in reasonably well. Senior High School, Metropolitan Region, Physical Education.

82  YES  Disadvantaged due to language difficulties, interpretation of texts. Application of humour, these ensure they 'behave in a different socialization pattern' which can be accepted or rejected by other students. Senior High School, Metropolitan Region, English.

<td>I found with other teachers' help you learn to cope. However, our problem is very minor. I have considered this in terms of being in a situation where there is a greater percentage of these children. District High School, Goldfields Region, Home Economics.</td>
</tr>
</tbody>
</table>
10 ADEQUATE There is not much that can be done. You've got to learn quickly when you're out. My situation is unique so far as I am teaching remedial Aborigines and I don't have to follow any curriculum. Programmes are composed of material I think is relative to the students' needs. District High School, Pilbara Region, Social Science.

11 INADEQUATE No training or very little in teaching of children who differ from the norm. Senior High School, Metropolitan Region, Science.

12 INADEQUATE Teachers, in general, tend to expect from the Aboriginal students, similar thought processes, expressions of attitudes and values that are similar to standards of behaviour of European students. This is most often not the case. Some of the Aborigines do not have the background of values and attitudes necessary to be motivated towards achieving meaningful aims. District High School, Goldfields Region, Physical Education.

13 INADEQUATE I know we did a little but we didn't really get told or shown how to deal with it. District High School, Yilgarn Region, Physical Education.

14 INADEQUATE No Aboriginal teaching was included in my course. Most newly appointed teachers to country schools are basically ignorant of Aboriginal culture. District High School, Kimberley Region, Manual Arts.

15 INADEQUATE Although inadequate, it is difficult to make it otherwise. The problem is how to COPE with these students without being told 'where to go'. You try hard but there are no rewards. Senior High School, Metropolitan Region, Library.

16 INADEQUATE No idea of the type of problems faced in this school. Senior High School, Metropolitan Region, Science.

17 INADEQUATE Totally inadequate. Senior High School, Metropolitan Region, English.

18 INADEQUATE My course gave me very little advice as to how remedial work could be set for these children, or how programmes should make allowance for them. Senior High School, Southern Region, English.

19 INADEQUATE Very little information given on educational needs of Aborigines and migrant children. Tendency of students to show as being IGNORANT but really it is lack of understanding of language and customs and teachers' requirements of pupils. District High School, Pilbara Region, Physical Education.
I'm not sure that it could have easily been better though. Experiencing these children in the classroom and talking to them individually is for me the most effective way to discover their educational needs. The Christmas Island children in particular like to talk on a one-to-one basis about their home countries etc. I have found that most of these children, especially Aboriginal children, respond reasonably well in a situation where they do not feel threatened by white children. A small remedial group of six or seven Aboriginal children is an excellent way to get to know them and their problems.

The course did cover generally handicapped topic but special programmes are not carried through at this school in the library.

Only one very short, shallow lecture in Year 2.

Although it would be difficult to develop a course to handle the problems where one to two Aboriginal children are in a class of thirty white children.

Very limited.

Nothing at all done in this area.

Too much teaching to the 'norms'.

No instruction was received at College concerning problem. As with other minority groups in class e.g. 'basics', teachers should be aware of these demands and be given some advice on how to reach these minorities whilst fulfilling commitments to majority of class.

With my specialist area we covered special areas.

I feel that teaching methods for non-English speaking students were inadequately covered.

No mention of likely problems and how to cope with multi-culture classes.

NO ethnic differences were EVER included in my particular course.
32 UNSURE Although College does not specifically cover this area in great depth I feel that it is a thing that you can adapt yourself to cope with the students needs.
Senior High School, Pilbara Region, Manual Arts.

33 INADEQUATE Inadequate in relation to expectation of what student should know, resources available, especially out of metropolitan area, how to cope with mixed classes, reading and writing disabilities.
Senior High School, Pilbara Region, Home Economics.

34 INADEQUATE Didn't really prepare me to cope with educational needs of any students.
High School, Southern Region, English.

35 INADEQUATE Nothing ever mentioned.
Senior High School, Southern Region, Home Economics.

36 UNSURE As this is such an individual problem a teacher cannot really be instructed in such an area, except for advice on who best to contact if having troubles.
District High School, Yilgarn Region, Manual Arts.

37 INADEQUATE A problem exists not due to the students who are usually socially and educationally competent but with the parents who cause tremendous problems when we seek parent help.
Senior High School, Metropolitan Region, Physical Education.

38 INADEQUATE As student teachers we were given no information as to the make-up of various schools, e.g. my particular school has a LOT of children of Dutch parents and there are numerous problems which come up constantly regarding religions.
Senior High School, Southern Region, Physical Education.

39 INADEQUATE No information given on how to attack this type of problem.
District High School, Geraldton Region, Mathematics/Science.

40 INADEQUATE To be able to cope with our problem at a six week trip to London would be adequate.
Senior High School, Metropolitan Region, Physical Education.

41 INADEQUATE There was no comment upon this problem throughout three years.
Senior High School, Metropolitan Region, Business Education.

42 INADEQUATE One education lecture only was given on this topic. This was an extremely good lecture, but additional studies in Aboriginal culture/language would have helped.
District High School, Goldfields Region, Business Education.

43 INADEQUATE No advice given at all. Completely inadequate
Senior High School, Southern Region, Physical Education.
44 INADEQUATE My final year course at Nedlands College had very little relevance to teaching of any kind. Most experience is gained in the workforce and by practice - not by any lecturer telling you the best way of coping with a situation. Senior High School, Metropolitan Region, Social Science.

45 INADEQUATE We were taught to teach the average student of which there are ONLY two in class. District High School, Metropolitan Region, Physical Education.

46 INADEQUATE There was much material provided for the education of retarded dyslexic and problem children, but little was mentioned regarding the difference in teaching children of varying cultures. Senior High School, Metropolitan Region, Physical Education.

47 INADEQUATE Inadequate as far as WHAT to do to help these students - not specific enough, from what I can remember. District High School, Metropolitan Region, English.

48 INADEQUATE From memory nothing specifically was geared this way, only in very general terms was it even mentioned. Senior High School, Metropolitan Region, Physical Education.

49 INADEQUATE I don't think I was prepared to cope with culturally different people at all. District High School, Southern Region, Manual Arts.

50 INADEQUATE Too much emphasis was geared towards the NORM Australian child. Senior High School, Metropolitan Region, English.

51 ADEQUATE Depends on maturity of the teacher and the amount of cultural differences they are faced with. I try to treat my two students as people. Senior High School, Metropolitan Region, Mathematics.

52 INADEQUATE I do not recall this aspect ever being discussed in any great detail. Senior High School, Metropolitan Region, Mathematics.

53 INADEQUATE This area was hardly touched on at College. I was quite fortunate in having a little insight into this area because my parents were migrants from a non-English speaking country. Senior High School, Metropolitan Region, Physical Education.

54 INADEQUATE We had no real information given at College on educational needs of culturally different students. Senior High School, Metropolitan Region, Physical Education.

55 INADEQUATE Very little done concerning teaching techniques, or awareness of social customs. District High School, Pilbara Region, Library.

56 ADEQUATE Education unit on Sociology gave good background knowledge on what to expect and what to look for to identify these problems. High School, Metropolitan Region, Science.
57  ADEQUATE  No problems ever encountered.
Senior High School, Metropolitan Region, Mathematics.

58  INADEQUATE  PRACTICAL experience with migrant children and children
with other learning difficulties could have been helpful.
Senior High School, Metropolitan Region, English/
Communications.

59  INADEQUATE  Lack of understanding of their specific problems and
strategies to overcome these problems.
District High School, Goldfields Region, Social Science.

60  INADEQUATE  Should it be possible, time should be devoted to showing
teachers how to cope with student deficiencies in reading.
However, my course was in a minor field.
Senior High School, Southern Region, Social Science.

61  INADEQUATE  No guidance.
District High School, Southern Region, English.

62  INADEQUATE  Very little time was devoted to this aspect at all.
Most inadequate.
High School, Metropolitan Region, English/Communications.

63  INADEQUATE  The main area that seems to have been missed at College is
for us to have been lectured to by individuals from different
cultures and give us insight into those cultures and ways
to assist others overcome problems that may arise.
Senior High School, Metropolitan Region, Manual Arts.

64  INADEQUATE  I didn't understand the different attitudes to people,
school and society that the different members of the
Aboriginal community would have.
Senior High School, Metropolitan Region, English/
Communications.

65  INADEQUATE  No real guidance on this subject provided, could probably
be included in Educational Psychology course as mini
course, but something SPECIFIC is needed.
High School, Metropolitan Region, Library/Social Science.

66  INADEQUATE  We did not look at very many situations or their outcomes,
therefore didn't discuss what types of problems might
arise or how to handle them.
High School, Metropolitan Region, Physical Education.

67  INADEQUATE  It is extremely difficult to cover a specialty area in a
course which is as broad and general as the one offered
at Nedlands.
Senior High School, Goldfields Region, Physical Education

68  INADEQUATE  More attention can be given to the various problems which
arise when aboriginal children are placed in a minority
situation. College students would benefit from first hand
teacher talks and information from people who have studi
such cultures.
Senior High School, Pilbara Region, English.
69 INADEQUATE Very little except for Aborigines.  
Senior High School, Metropolitan Region, Science.

70 INADEQUATE Having lived overseas and being of a different cultural  
background myself, I feel that I am adequately equipped to  
deal with the obvious problems that arise and that I  
understand the advantages that a different cultural back­  
ground can lead to.  
Senior High School, Southern Region, French.

71 INADEQUATE I can't remember any discussion on the needs of these children.  
Senior High School, Metropolitan Region, English.

72 ADEQUATE I would teach these students in the same way as I do now  
whether or not my College course was involved.  
Senior High School, Metropolitan Region, Music.

73 INADEQUATE Only area dealt with was Aborigines (general) and this in  
not very great detail.  
Senior High School, Southern Region, Art.

74 ADEQUATE Each case is completely different. You learn how to cope  
when you have to. This is the best specialised preparation  
for the future. Last year was preparation for this year  
after teaching an entire Aboriginal class all of whom were  
of low ability.  
Senior High School, Southern Region, Home Economics.

75 INADEQUATE If a teacher is destined to teach Aboriginal students,  
the only course that would help is regular and frequent  
contact with Aboriginal students and communities. Some  
course in Aboriginal culture, Past and Present, would be  
a big help.  
District High School, Kimberley Region, Business Education.

76 INADEQUATE It was not treated at all.  
Senior High School, Metropolitan Region, Physical Education.

77 INADEQUATE Little or no attention was paid to students with language  
disabilities or with the problems of Aboriginal children.  
District High School, Goldfields Region, Mathematics.

78 ADEQUATE In my major study area of Physical Education. As for  
other course areas, I'm not so sure.  
Senior High School, Metropolitan Region, Physical Education.

79 ADEQUATE I can't remember what was taught at College, but I didn't  
have to adjust to these situations when I was teaching.  
Senior High School, Metropolitan Region, Science.

80 ADEQUATE The course provided me with an adequate insight to the  
problems of educating those of different cultures.  
Primary School, Metropolitan Region, Music.
81 INADEQUATE A second language should be included in course.
Senior High School, Metropolitan Region, Manual Arts.

82 INADEQUATE There was insufficient practical preparation.
District High School, Yilgarn Region, Manual Arts.

83 INADEQUATE I have found so far the only way to partly cope with
the problem is through trial and error.
District High School, Southern Region, Mathematics.

84 INADEQUATE I feel the College course undertaken by me in no way
prepared me to teach children of a different ethnic/
cultural background.
Senior High School, Goldfields Region, Social Science.

85 INADEQUATE This was rarely mentioned, perhaps one lecturer in
education but no method/solution offered.
Senior High School, Metropolitan Region, English.
APPENDIX A (3)

Are you WILLING to PARTICIPATE in a FOLLOW-UP?

Comments made by Teachers

<tbody>
<tr>
<td>1</td>
<td>YES</td>
<td>I would be more than happy to participate in a follow-up. It is essential that the experiences of teachers in different areas are shared between ourselves and with College students. Personally, an isolated teacher/librarian like myself would really appreciate advice on a more effective provision of library services to Aboriginal students, from others in my field who have had more success. Senior High School, Goldfields Region, Librarian.</td>
</tr>
<tr>
<td>2</td>
<td>YES</td>
<td>The only students in regard to this survey are four well assimilated children who would not present the problems that may occur. District High School, Yilgarn Region, no subject details.</td>
</tr>
<tr>
<td>3</td>
<td>YES</td>
<td>Approximately a twenty percent Aboriginal population at Senior High School. Very good for learning about this problem as it is of great concern. Any help - am willing to assist. I only teach Art. Senior High School, Midlands Region, Art.</td>
</tr>
<tr>
<td>4</td>
<td>YES</td>
<td>If the exercise is considered to be of value. Senior High School, Metropolitan Region, English.</td>
</tr>
<tr>
<td>5</td>
<td>NO</td>
<td>I feel that in the schools I have had experience with, there appears to be very few problems associated with this survey and therefore I would not be able to assist in this area. Senior High School, Metropolitan Region, English.</td>
</tr>
<tr>
<td>6</td>
<td>NO</td>
<td>I do not have enough contact with extreme cases about disadvantaged children. District High School, Yilgarn Region, Business Education.</td>
</tr>
<tr>
<td>7</td>
<td>NO</td>
<td>Not sufficiently involved in cultural affairs to hand out pearls of wisdom. Senior High School, Metropolitan Region, Library.</td>
</tr>
<tr>
<td>8</td>
<td>NO</td>
<td>Even though we have a large population of migrants mainly Italian students the greater majority of these students are not new to Australia, therefore we have no problems with language or student expectations, behaviour etc. Senior High School, Metropolitan Region, Physical Education.</td>

<tr>
<td>9</td>
<td>NO</td>
<td>My time is precious in the teaching field and with other school responsibilities. District High School, Goldifelds Region, Home Economics.</td>
</tr>
</tbody>
</table>
10 NO Because of the distance and isolation factors of my present situation. District High School, Goldfields Region, Social Science.

11 NO I do not have enough Aboriginals to warrant drawing generalizations. Senior High School, Southern Region, English.

12 YES The teachers too are at a disadvantage. They have very little chance of understanding the Aborigine students since many/most do not begin to understand the Aboriginal culture. I believe that if teachers are given the opportunity to gain an understanding of the people we are teaching, our contact with them will be more meaningful. District High School, Goldfields Region, Physical Education.

13 YES As I am in the library I do not have much experience with these students i.e. my experience is limited and probably inadequate for detailed interviews, but I am willing to participate. Senior High School, Metropolitan Region, Library.

14 YES Definitely, there is a great need. Last term my Year 8 basic class was composed of over ½ migrant students. They could not be assisted in that class as it was also composed of remedial students, behaviour problem students so they were placed into a higher level to offer them a greater challenge - a greater chance of success. Senior High School, Metropolitan Region, English.

15 YES Due to limited experience with Aboriginal/migrant students my participation may not be of much value. Senior High School, Southern Region, English.

16 YES Glad to help out as I feel that this school is disadvantaged but students are still treated as intelligent persons. More staffing requirements to assess pupils' needs and what they hope to achieve from education at school levels. Senior High School, Pilbara Region, Physical Education.

17 YES Perhaps not as relevant in my situation at present since I do not have any subject classes. Agricultural School, Southern Region, Library.

18 YES Thank goodness there is someone who realises the problems we face when posted to an area of the State we are not familiar with. District High School, no area details, Home Economics.

19 YES Generally speaking there is no migrant problem in to speak of and the aboriginal population is very small. District High School, Southern Region, Physical Education.
20 NO
Not enough experience to answer a detailed questionnaire.
Senior High School, Southern Region, English.

21 YES
Interviews may be difficult in the country.
Agricultural District High School, Yilgarn Region, Manual Arts.

22 YES
My first appointment was to a class consisting of four Australian, two Burmese, nine Aborigines (mission cared for), one Irish, two Indians and four Italians. The Aboriginals were the most rewarding people to teach and from whom to learn.
Senior High School, Metropolitan Region, Business Education.

23 UNSURE
If it is worded a lot better than this survey. Very time consuming to check student rolls and answer questions eight to ten. This is vital for the needs of the first year out teacher.
Senior High School, Southern Region, Physical Education.

24 UNSURE
Perhaps!
District High School, Metropolitan Region, English.

25 NO
Not enough problems for my experience to be of any advantage to your survey.
Senior High School, Metropolitan Region, Business Education.

26 YES
I am willing to help, however, I do not feel that my experiences will be beneficial as I have not encountered any problems although I am well aware that they do exist.
Senior High School, Metropolitan Region, Mathematics.

27 NO
There are a number of schools which have a high proportion of Aboriginal students who need teachers who can understand their problems and customs.
Senior High School, Southern Region, Physical Education.

28 NO
I feel that having worked in the Aboriginal/Migrant field previously would have given me preconceived views and therefore my approach initially would not be that of the average beginning teacher.
Senior High School, Metropolitan Region, English.

29 YES
Mainly interested in seeing more done towards preparing people for teaching of Aboriginals.
District High School, Goldfields Region, Science/Mathematics.

30 YES
It would be difficult to prepare teachers for every eventuality in learning difficulty amongst students. However, educational theory is little or no preparation for practical experience.

31 YES
Third term best time for such a questionnaire.
Senior High School, Metropolitan Region, Science.
The lack of reading ability is not confined to English students as most of the Social Studies reference material is above the reading level of these students. Senior High School, Southern Region, Social Studies.

This is a worthwhile field of study for educational researchers. Senior High School, Metropolitan Region, English.

I don't know if I could offer much assistance as I have not experienced any real problems with children from Aboriginal/Migrant backgrounds. High School, Metropolitan Region, Physical Education.

Future courses at Nedlands should include a theoretical and practical unit in filling out questionnaires. Senior High School, Goldfields Region, Physical Education.

If time is arranged during lunch times. Senior High School, Metropolitan Region, Science.

is peculiar in its migrant situation, in particular, half the school children are from overseas, mainly England. High School, Metropolitan Region, Communications/English.

The numbers given on the previous page are only approximations as I am unfamiliar with the background of ALL students I teach. Senior High School, Metropolitan Region, Music.

Prepared to answer questionnaire but not interview. Senior High School, Metropolitan Region, Home Economics.

A practical course in curriculum development - at a local level, seems imperative. Teachers often find that they have to design courses in tune with the community, courses that the students are going to want to do, courses that relate strongly with their life style, with their values and with their needs. District High School, Kimberley Region, Business Education.

Provided that this new questionnaire does not ask questions that the Principal/Guidance Officer would be better suited to answer. Senior High School, Metropolitan Region, Physical Education.

From my subject area experience I haven't really encountered any major problems with teaching migrant students, hence I doubt if I would be of any real value. Senior High School, Metropolitan Region, Physical Education.
At present I am not teaching as my baby is due in two weeks and I should then have my hands full for a while. However, I would be interested in seeing a study done on retarded children in government schools.
Senior High School, Metropolitan Region, Science.

However, I'm a specialist teacher who teaches many classes. I do not feed adequate enough to provide information on specific individuals with specific problems related to cultural background. Fortunately my area of specialization (music) is a universal language, therefore I don't face the same problems as other teachers.
Primary School, Metropolitan Region, Music.

Fairly difficult to isolate specific needs of students in schools.
Senior High School, Metropolitan Region, Physical Education.

I am willing to participate in this programme, not only to further awareness of 'disadvantaged students in schools' but to develop my own skills of perception in anticipating students' needs.
Senior High School, Metropolitan Region, English.
Dear

I am writing to request your assistance because you are a past student of the Nedlands College of Advanced Education (formerly Western Australian Secondary Teachers College).

An Aboriginal Education Committee was formed within this College in 1978 to examine the needs of student teachers in respect to preparation for teaching classes in which there are Aboriginal/part Aboriginal students. This Committee has now extended its concern to include training needs in relation to the teaching of migrant students. The Committee wishes to establish the extent to which past students of this College (within the first two years of their teaching experience), have encountered problems in teaching that relate specifically to teaching classes that include students of different cultural backgrounds.

The enclosed questionnaire is sent to you in the hope that the information you can provide will assist the College to determine future needs in these areas.

Yours sincerely,

Robert Vickery
PRINCIPAL
A survey of ex-students of the Medlands College of Advanced Education (formerly W.A. Secondary Teachers' College) in relation to teaching classes including children of different cultural backgrounds.

SECTION ONE:

To all teachers who graduated from W.A. Secondary Teachers College in 1976 and 1977 who were appointed to schools and have completed at least one year of teaching.

...............................................

.............................................
Dear

I am writing to thank you for your participation in the survey concerning Teacher Education and the teaching of classes that include children of different cultural backgrounds.

The information provided by respondents has proved extremely useful in creating an awareness of the extent and nature of problems specific to the teaching of children with different backgrounds, and will assist in the evaluation of College courses and establishing need priorities for the future.

In fact, the quality and number of spontaneous comments in addition to the actual answers to questions is such that it may no longer be necessary to proceed with the intended form of follow up.

You may be contacted at a later date should further information be required.

Thank you again for your interest and cooperation in this study.

Yours sincerely,

Mabel Kaplan
SPECIAL PROJECTS OFFICER
